

Description: CristalACTiV™ DT-52 is a high surface area ultrafine TiO₂ powder with addition of WO₃ to be used mainly in Selective Catalytic Reduction (SCR) of NO_x (DeNO_x).

Applications: CristalACTiV™ DT-52 is recommended for evaluation in:

- SCR-DeNO_x
- Chemical catalysis

Typical Properties: This document does not constitute a specification. Product specifications are available upon request.

- | | |
|--|-----------------------|
| • Crystal form: | Anatase |
| • TiO ₂ content (ignited base): | ~90 wt% |
| • Surface area: | ~90 m ² /g |

Regulatory Status: CristalACTiV™ DT-52 has a wide range of regulatory approvals for various applications worldwide. Please see www.tronox.com or contact your Tronox sales representative for additional information. Regulatory information requests may also be submitted at chemprodsteward@tronox.com.
